Dear Mr. Name:

How's the air in there?

Whether you see it on TV or read it in the newspaper, it's obvious to both parents and school officials that what we—and our children—are breathing in closed-up school and office settings has become one of the, if not the most, important indoor environmental issue of the '90s.

ATC Environmental Inc. (ATC) works closely with New Hampshire schools and businesses to help them determine whether their sites are healthy. If they are not, ATC's Indoor Air Quality (IAQ) Specialists help plan ways to eliminate the problems. ATC's investigations are based upon years of research and experience identifying low-level pollution sources that are complex and sometimes subtle. By combining the best science with our extensive real-world experience, ATC can guide you to cost-effective and healthy solutions.

While ATC's IAQ Services are especially important to schools, ATC also offers Asbestos Services to assist schools with their AHERA requirements. Services include building inspections, project design and monitoring, air clearance testing, and AHERA reinspections. ATC is a full-service environmental consulting firm, organized into major divisions to better address our client's specific needs, including: Asbestos and Lead Risk Management; Indoor Air/Industrial Hygiene; Environmental Management; Analytical Laboratory; Litigation Support; and Environmental Training.

Thank you for taking the time to read this letter. An ATC representative will call you shortly to inquire how we may specifically address your needs. If you have any immediate concerns, feel free to call Mark Goldman, our IAQ specialist, or myself, at 617-932-9400. We look forward to speaking with you.

Very truly yours,

ATC ENVIRONMENTAL, INC.

Dennis J. Girard, CIH
Director, Indoor Air Quality Division
